

Swedish Program
Energy and Environmental Economics

August – December 2018

Syllabus

(preliminary version, to be updated during the course)

This course provides a general overview of important aspects of provision, management, and economic and political importance of energy resources and their environmental implications.

More specifically, the course will address market interactions, pricing and regulation in oil, gas, coal and electricity markets. In this discussion, we will also cover most recent developments in the energy field, such as fracking revolution in oil and gas, as well as touch upon the issues of energy security. We will proceed to address the environmental aspects of energy, talk of renewable energy, emissions and emission trading, and discuss the prospects of green energy transition. To add a broader economic perspective, we will also look into the impact of energy resources, and natural resources in general, on economic and institutional development.

This course is typically given credit by Economics departments.

Intended Learning Outcomes: By completing this course a successful student will be able to

- Describe and analyze the key issues in functioning of electricity, oil and gas markets, and their influence on the market outcomes for consumers and producers;
- Describe and analyze the environmental aspects of energy;
- Assess advantages and disadvantages of currently used and proposed energy- and environment-related policies and regulations;
- Analyze and explain the interrelation between resources, institutional and economic development, and growth;
- Discuss and conceptualize topical issues within the field of energy and environmental economics with a group of peers.
- Use instruments such as tables, graphs, basic game-theoretical models and analytical tools to analyze the issues of energy and environmental economics.

The approaches learned in the course would also enable the student to examine economic problems in other related fields such as international trade, theory of industrial organization or political economy.

Pre-requisites: One course in macroeconomics, one course in microeconomics and one course in calculus.

Teachers: Elena Paltseva, Assistant Professor of Economics at Stockholm Institute of Transition Economics (SITE) at the Stockholm School of Economics.

- E-mail: elena.paltseva@swedishprogram.org, Phone: +46 8 736 9688

Webpage: Readings, lecture notes, and other information about the course will be uploaded on the course webpage. It is thus very important that you visit it often.

Seminars: There will be 12 three-hour seminars, see the tentative overview below. Seminars include lectures, discussions, experiments and presentations of individual/two by two/group work. The seminars are held at the Stockholm School of Economics (see rooms below).

Readings: The course reading will mostly consist of articles and reports (see below for a preliminary list, subject to revision). There will be no single required textbook. However, occasional chapters from Subhes C. Bhattacharyya, 2011. "Energy Economics. Concepts, Issues, Markets and Governance", Springer will be used during the course.

Grading: Your grade will be calculated according to the following breakdown:

- Participation, including "speed dating" on energy markets: 10 %
- Case discussion/presentation: 25%
- In-class presentation of the group project: 30 %
- Final exam: 35 %

Attendance and participation: Your regular attendance and active participation is required. Every absence will lower your overall participation grade by one step (A becomes A-, etc.). You can avoid this reduction by doing an assignment for compensating for your absence. However, this compensation opportunity is only available for a maximum of two absences. If there are any readings that you are expected to complete before the class, please come to class prepared to engage fully with the materials.

Case discussion/presentation will be based on the same case study for the entire class. Students will form groups, and each group will present a specific aspect of this case, followed by general discussion. For example, a case can address global oil and gas industry, with questions to groups including (i) a comparison of the profitability of the oil value chain segments, and reasons for variation in profitability, (ii) a comparison of the incentives to innovate of national vs. international oil companies, (iii) advantages of relying on natural gas vs. oil in historical perspective, etc.

Group project/presentation: Same groups as for the case discussion are also expected to work on a group project and present your findings in class. The subject of the project is to be within the energy economics or environmental economics, and can be either chosen from a list of potential topics offered by the teacher, or proposed by the group itself). The project should be based on a scientific approach, including a well-posed question, clear methodology and criticism of your sources. You will receive more instructions during the course.

There are two hand-ins for your work with the project:

- Hand-in of ideas about the subject of your project: In this hand-in, you should suggest and briefly describe ideas for the subject you would like to write about.
Deadline: September 10th, 2018

- Hand-in of synopsis/plan of your project: Here you give an overview of your planned project, your research question, what aspects you intend to cover, etc. You can do it a bullet list/a table of contents in which you have included descriptions of what you will include in each part of your presentation.

Deadline: October 1st , 2018

These hand-ins are then followed by in-class presentation of your project (October 22nd, 2018). Each group member is expected to take part in the presentation. After each presentation we have a short class discussion. Again, more information and guidance will be provided in the beginning of the course.

Written final exam: A 2-hour exam will be held in during the exam week, and will cover all the material of the course. It will include both analytical and essay-type questions. An example of exam questions will be provided early in the course.

Course structure and reading list: (please note that the reading list is preliminary and will be updated as the course proceeds. Compulsory reading is marked by *.)

Seminar 1. August 27, Room 328.

Energy and environmental economics: introduction.

- *BP Energy Outlook 2017 (<https://www.bp.com/content/dam/bp/pdf/energy-economics/energy-outlook-2017/bp-energy-outlook-2017.pdf>) (pp.1-22 compulsory, the rest is recommended reading)
- *International Handbook on the Economics of Energy, 2009. Evans, J. and Hunt, L.C. (editors), Edward Elgar Ch. 1 (Fouquet, R. "A brief history of energy") <http://libris.kb.se/bib/12736459>
- *Lior N., Sustainable energy development: The present (2011) situation and possible paths to the future, 2012. Energy, vol. 43, issue 1, pp. 174-191 (sections 1-3 compulsory, the rest is recommended reading)
http://www.seas.upenn.edu/~lior/documents/Sustainableenergydevelopment_May2011_withsome_game-changers.pdf
- *Smil, V., 2000. "Energy in the Twentieth Century: Resources, Conversions, Costs, Uses, and Consequences," Annual Review of Energy and the Environment, 25, pp. 21—51.
<http://vaclavsmil.com/wp-content/uploads/docs/smil-article-2000-aree2000-1.pdf>

Seminars 2-4. September 3, Room 328, September 10, Room 538

Basics of game theory. Oil market. Properties of crude oil. Oil supply and demand. Market structure. Oil pricing. OPEC. Fracking and shale revolution in the oil context.

- *Assessment of the Potential Impacts of Hydraulic Fracturing for Oil and Gas on Drinking Water Resources, (2015), US Environmental Protection Agency, Chapter 2,
http://ofmpub.epa.gov/eims/eimscomm.getfile?p_download_id=523539
- * Bhattacharyya, Ch. 14.2.1-2 (scan for historical perspective), 14.3.3.1-3
- * BP energy outlook, 2016 edition, <http://www.bp.com/content/dam/bp/pdf/energy-economics/energy-outlook-2016/bp-energy-outlook-2016.pdf>, section on oil and liquid fuels
- * Dale S., (2016). "Energy in 2015: A year of plenty", BP presentation, London
<http://www.bp.com/content/dam/bp/pdf/energy-economics/statistical-review-2016/bp-statistical-review-of-world-energy-2016-spencer-dale-presentation.pdf> , section on oil markets

- * Fattouh, B. (2011). “An Anatomy of the Crude Oil Pricing System”. Oxford Institute of Energy Studies, <https://www.oxfordenergy.org/wpcms/wp-content/uploads/2011/03/WPM40-AnAnatomyoftheCrudeOilPricingSystem-BassamFattouh-2011.pdf>, sections 1, 3, 4 (the rest is optional)
- * Samuelson, R., (2008). “Oil: An Introduction for New Zealanders” Ministry of Economic Development of New Zealand, <http://www.mbie.govt.nz/info-services/sectors-industries/energy/energy-data-modelling/publications/oil-an-introduction-for-new-zealanders/oil%20an%20introduction.pdf>, sections 1 and 2.4 (other sections are optional but also helpful reading)
- Behar, Alberto, Ritz, Robert A., OPEC vs US shale: Analyzing the shift to a market-share strategy, Energy Economics (2017), <http://www.sciencedirect.com/science/article/pii/S0140988317300221>
- “Oil and Gas for Beginners: A Guide to the Oil and Gas Industry”, (2013). Deutsche Bank Global Markets Research. Available online. *Highly recommended background reading on many sections of this topic and more!*

Seminar 4-5. September 17, Room 538 and September 24, Room 538.

Gas market. Gas supply and demand. Sequential markets. Convergence and Divergence of prices.

- * Bhattacharyya, Ch. 15
- Le Coq C. and R. Green (2010), [The length of contracts and collusion](#), International Journal of Industrial Organization 28(1), 21-29.
- Liski M. and J.P. Montero (2006), [Forward trading and collusion in oligopoly](#), Journal of Economic Theory 131 (1), 212-230

Seminar 5. September 24, Room 538

CASE DISCUSSION.

Seminar 6. October 1, Room A975a

Energy security. Definition. Index approach. REES, CERE, TRI estimates for Europe. Policy solutions.

- *Bhattacharyya, Ch 20.
- *Le Coq, C. and Paltseva, E. (2009) [Measuring the security of external energy supply in the European Union](#), Energy Policy 37: 4474-4481.
- *Le Coq, C. and Paltseva, E. (2012) [Assessing Gas Transit Risks: Russia vs. the EU](#), with E. Paltseva, Energy Policy, 4: 642-650.
- Sovacool, B.K. and Mukherjee, I. (2011) ‘Conceptualizing and measuring energy security: A synthesized approach’, Energy Policy 36: 5343-5355

Seminars 6-8. October 1, Room A975a, October 8, Room 328 and October 15, Room 320.

Natural resources and economic development. Dutch disease. Resource curse. Natural resource and institutional development. Oil and democracy

- *Andersen, J., Johannesen, N., Lassen, D.D. and Paltseva, E., 2016, “Petro Rents, Political Institutions, and Hidden Wealth: Evidence from Offshore Bank Accounts”, forthcoming at JEEA, [http://paltseva.com/AndersenJohannesenLassenPaltseva\(2016\).pdf](http://paltseva.com/AndersenJohannesenLassenPaltseva(2016).pdf)
