## Social Psychology of Health and Well-Being

**Time and date** Wed 14.15-17

**Instructor:** Miriam Zehnter

### **Course description:**

Psychological well-being among undergraduate students is a growing research topic among scientific psychologists. Stress and anxiety about friendship, love, financial security, pandemics, and the future of the planet occupy the minds of many university students (and others). Such is the focus of this course.

We will examine the research in social psychology which analyses current societal conditions in many western societies which are creating an increase in stress and anxiety among young people. In addition, we will examine psychological coping strategies and address the research on what makes most people content or happy, and thus, promotes mental health and general well-being. Health and wellness issues will be examined in relation to different gender and ethnic identities, as well as in the context of cultural notions of success and failure, in school, work, leisure, and in personal relationships. Attention will also be given to how the use of social media – from Instagram to dating apps- among young people can psychologically affect one's sense of personal identity. Our comparative lens will be on the empirical research in social psychology which examines the mental health and well-being among college-aged populations in the U.S. and Sweden, underscoring both differences and similarities in mental health indicators.

### **Learning outcomes:**

Students will gain an understanding of a social perspective on health and well-being. They will learn how context factors (e.g., one's environment, climate change), socio-demographic factors (e.g., gender, race) and individual characteristics (e.g., health behaviours) interact to impact physical and psychological health and well-being. Students will also acquire transferable skills, such as reading and discussion scientific papers, as well as scientific writing.

### **Readings:**

We will not follow a textbook during this course. Instead, we will read relevant publications that review topics of our interest and present important studies. The readings are diverse, but they are always related to the theme of the seminar, i.e., they address different mental health issues and challenges to well-being that young adults may face, as well as articles about environment and individual factors that promote mental health and well-being. Some articles were chosen to address mental health and well-being issues affecting youth in Sweden and the US. The selected materials will be distributed on the web-page for the course.

The articles are listed in the syllabus but may be subject to change.

### **Study visit(s):**

There is one study visit planned for this course, if conditions allow. Time and date will be arranged later.

### **Course requirements:**

**In-class quizzes (20% of final grade):** At the beginning of each lecture (except the introduction), there will be a short in-class quiz (15 minutes) based on the reading for the lecture. Students will be answering two to three questions that cover the readings main content. Each quiz will be followed by a discussion on the correct answers and the reading more generally. The goal of the quizzes is helping students to better and consistently learn the material, but it also has the consequence of helping them monitor and improve their grade. There will be 10 quizzes in total, but only the 8 best quizzes grades will count towards the final grade.

**Active participation (20% of final grade):** This course takes an interactive approach that requires engaged participation from all members of the class. Students' presence is essential to the liveliness of the course; therefore, regular attendance is expected and considered mandatory.

Everybody should behave respectfully in the classroom. This includes coming to class on time, giving speakers undivided attention, addressing classmates and the instructor with respect, and refraining from academic dishonesty (e.g., plagiarism, taking credit for the work of others, etc.).

**Student presentation (20% of final grade):** In small groups of 2 to 3, students will prepare a presentation and lead a discussion on one of the lecture's main topics. In the presentation, students will be expected to present scientific literature that goes beyond the mandatory reading. Here, they are free to choose their own focus of interest (within the lecture's main topic!).

**Final paper (10 pages)(30% of final grade):** The final exam is as thorough examination of a phenomenon related to the classes topic that students find especially interesting. The paper includes a literature review and a proposal for a study design that could be used to study the phenomenon further.

**Final paper proposal (1 page, 10% of final grade):** To make sure students are on the right track, they will submit a final paper proposal that outlines the topic and approach of their final paper.

## Social Psychology of Health and Well-Being

Fall 2022

### **In-class quizzes (20% of final grade):**

At the beginning of each lecture (except the introduction), there will be a short in-class quiz (15 minutes) based on the reading for the lecture. Students will be answering two to three questions that cover the readings main content. Each quiz will be followed by a discussion on the correct answers and the reading more generally. The goal of the quizzes is helping students to better and consistently learn the material, but it also has the consequence of helping them monitor and improve their grade. There will be 10 quizzes in total, but only the 8 best quizzes grades will count towards the final grade.

### **Active participation (20% of final grade):**

This course takes an interactive approach that requires engaged participation from all members of the class. Students' presence is essential to the liveliness of the course; therefore, regular attendance is expected and considered mandatory.

### **Student presentation (20% of final grade):**

In small groups of 2 to 3, students will prepare a presentation and lead a discussion on one of the lecture's main topics. In the presentation, students will be expected to present scientific literature that goes beyond the mandatory reading. Here, they are free to choose their own focus of interest (within the lecture's main topic!).

### **Final paper (10 pages)(30% of final grade):**

The final exam is as thorough examination of a phenomenon related to the classes topic that students find especially interesting. The paper includes a literature review and a proposal for a study design that could be used to study the phenomenon further.

**Final paper proposal (1 page, 10% of final grade):** To make sure students are on the right track, they will submit a final paper proposal that outlines the topic and approach of their final paper.
